

LANmark-OF Plug&Play Patch Panels

LANmark-OF Plug&Play Blank Filler

Nexans ref.: [N441.2MBP](#)

- Blind plate to fill up unused positions in the Plug&Play Optical Patch Panel

DESCRIPTION

The Nexans' Plug and Play patch panel can hold up to 4 MPO modules.

Often these 4 positions are not completely filled up at the start of a data center, but kept for possible extensions in the rack.

The blind plates are then used to give the patch panel a finished look.
