

- Universal: can be used with all current LANmark snap-in connector types
- Allows re-termination of the connectors

Description

Application

All Nexans LANmark snap-in connectors are toolless and can thus be terminated to the cable without the need for special tools. However, in order to ease the installation, the Universal Comfort Tool makes the termination action more comfortable. The tool is universal meaning that it can be used with all LANmark toolless snap-ins (EVO series, and LANmark-7 GG45).

For the LANmark-5 and LANmark-6 EVO snap-in connectors, the tool incorporates an extraction module allowing the removal of the connector respecting the possibility to re-use it.

Standards

International ISO/IEC 11801
