

RACK STUDS™

A revolutionary replacement for cage nuts which are used to mount IT, PRO A/V, Security, and Telecommunications equipment in 19" racks. **Rackstuds™** make it much easier to mount your gear because they go from the front and provide you with a place to support your equipment while you spin on the lock nut. This makes inserting and removing **Rackstuds™** much quicker and assists with mounting even heavy equipment as it no longer needs to be balanced in one hand!

Rackstuds™ are much simpler, faster, safer and very strong.

Series II

- Redesigned nut with screwdriver slot
- Longer threads makes hanging gear easier
- Improved leverage strength up >30%
- Fits even thicker rails
- Now even easier to insert
